Sample numbers

- Day 14
  - Small-Y: 10 males, 3 females
  - Large-Y: 9 males, 6 females
- Day 16
  - Small-Y: 11 males, 3 females
  - Large-Y: 7 males, 6 females
- Day 18
  - Small-Y: 7 males, 5 females
  - Large-Y: 12 males, 3 females

Additional results

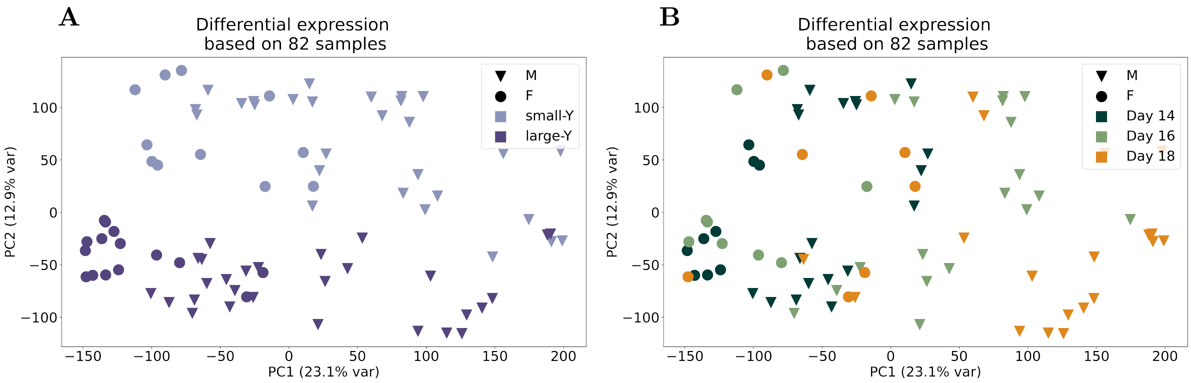

Figure S1: **PCA plots of full dataset**. (**A**, **B**) PCA of all samples, hightlighted by Y-haplotype (A) or time point (B).

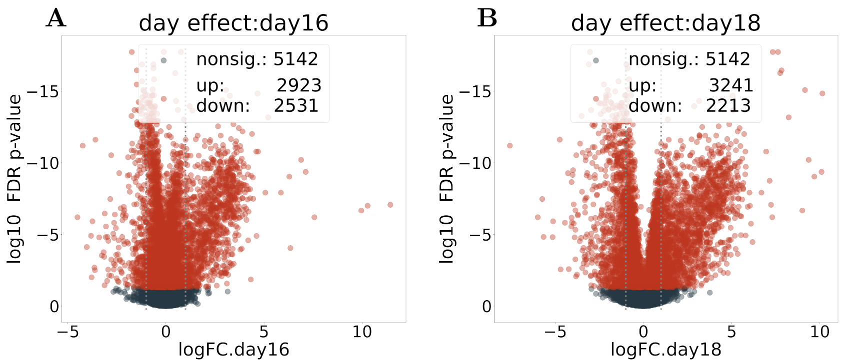

Figure S2: **Volcano plots of day-comparisons on full dataset**. The comparison is of coefficients day 16 (A) and day 18 (B) to the intercept (day 14).

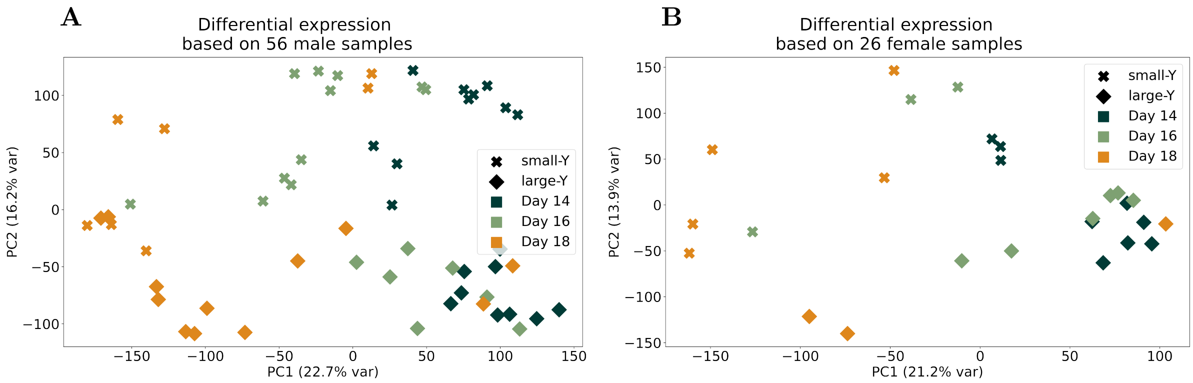

Figure S3: **PCA plots of male and female samples separated**. Separate analysis of male (A) and female (B) samples.

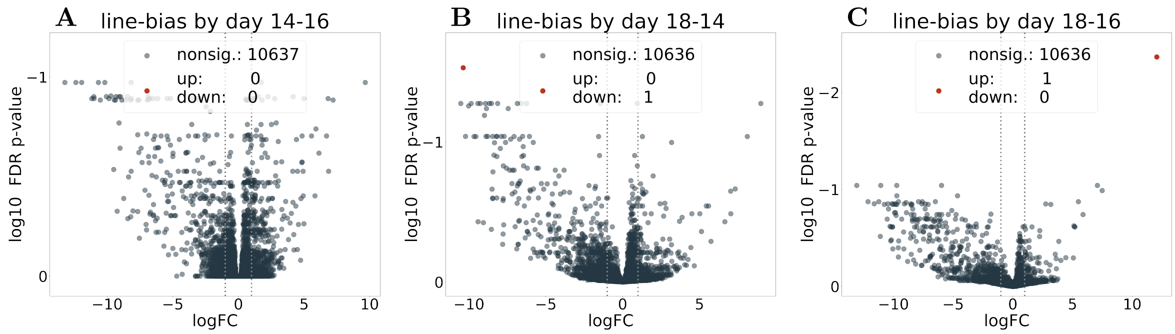

Figure S4: **Volcano plot of male samples line-by-day interaction**. The interaction is calculated between the contrasts of smallY-largeY and each pairwise day comparison, day 14-16 (A), day 18-14 (B) and day 18-16 (C).

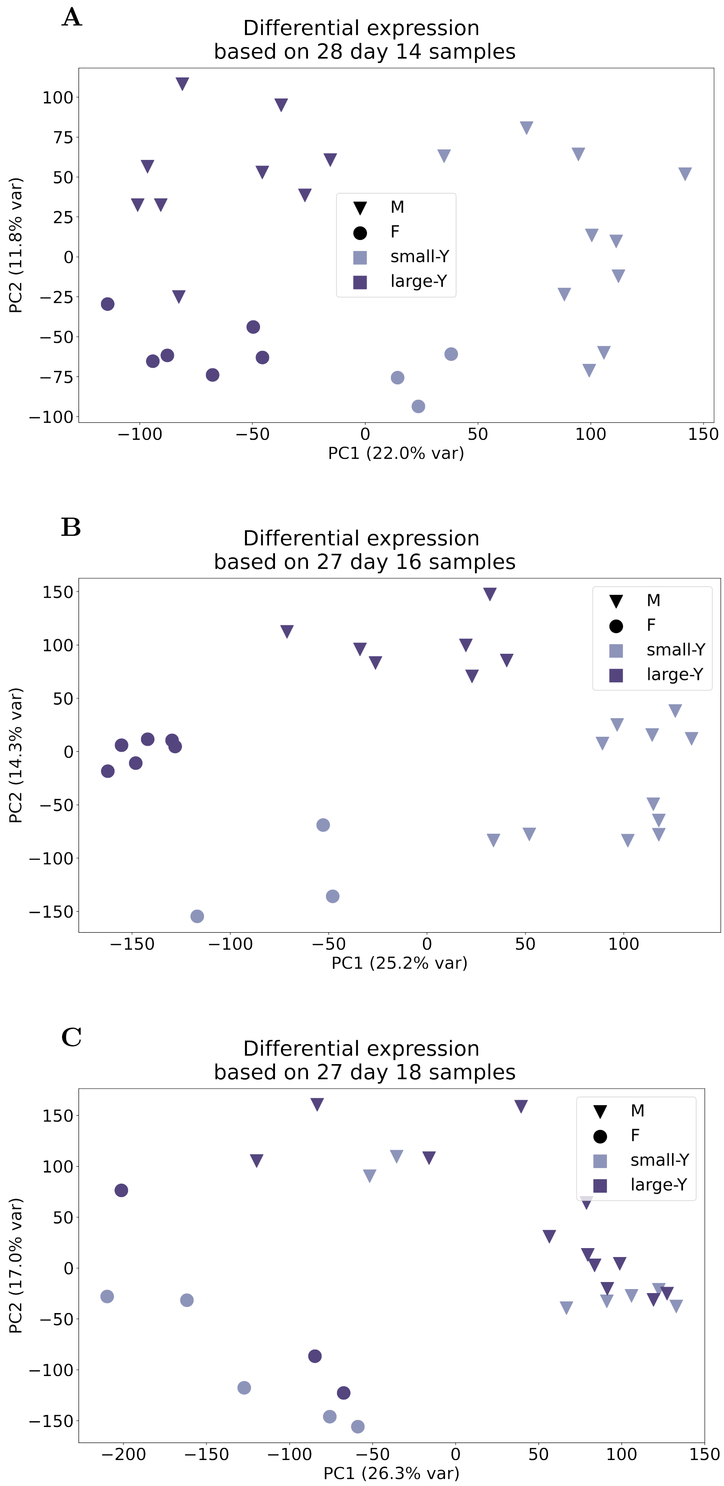

Figure S5: **PCA plots of samples from each time point separately**.

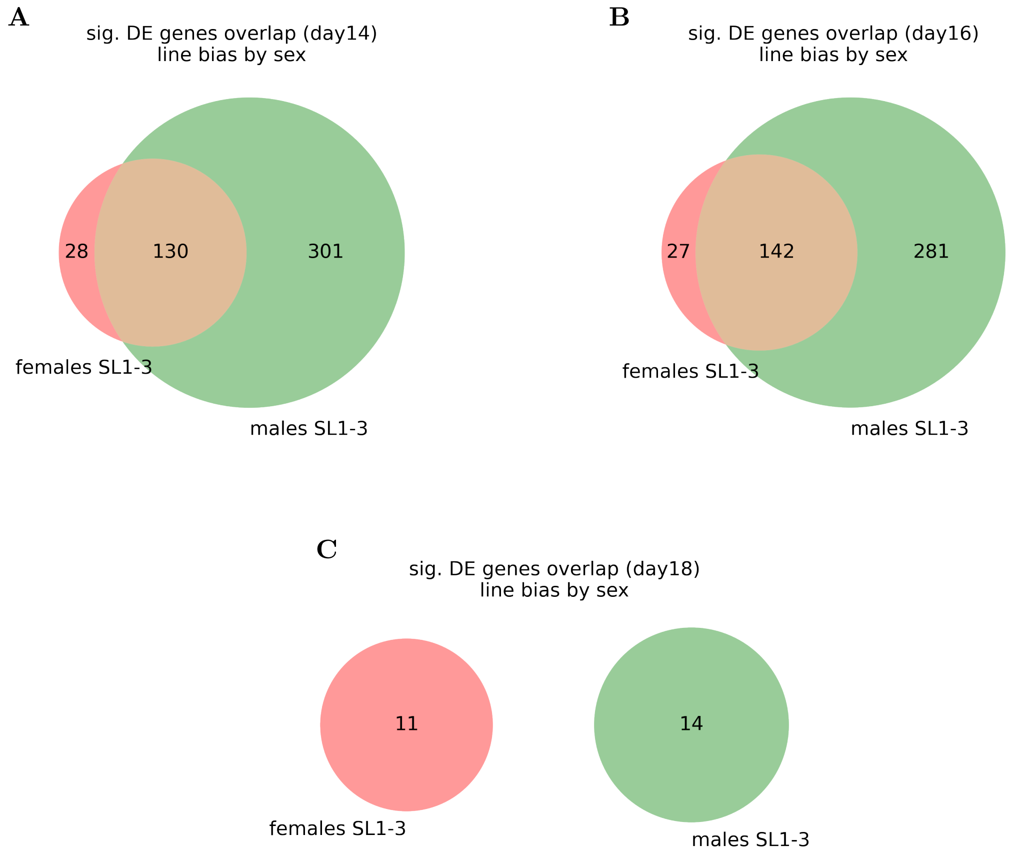

Figure S6: **Overlap of line-biased genes between the sexes**. One overlap for each day, significance calculated on day-separated samples.

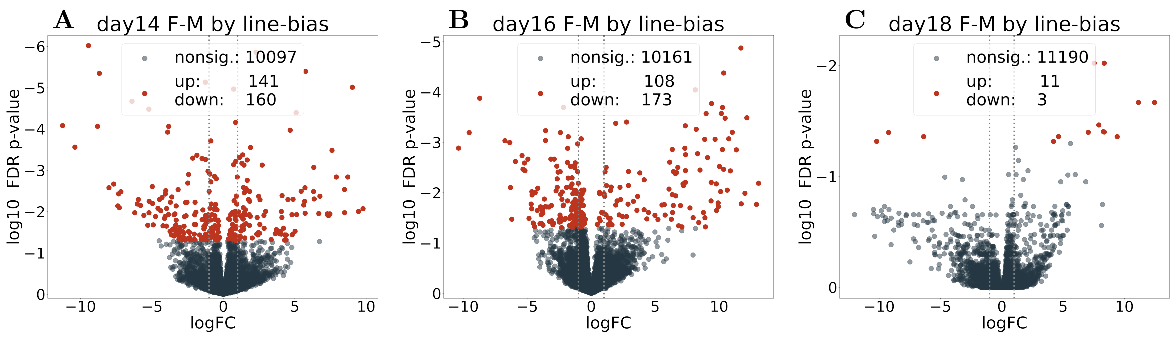

Figure S7: **Volcano plot of line-by-sex interaction for each time point**.

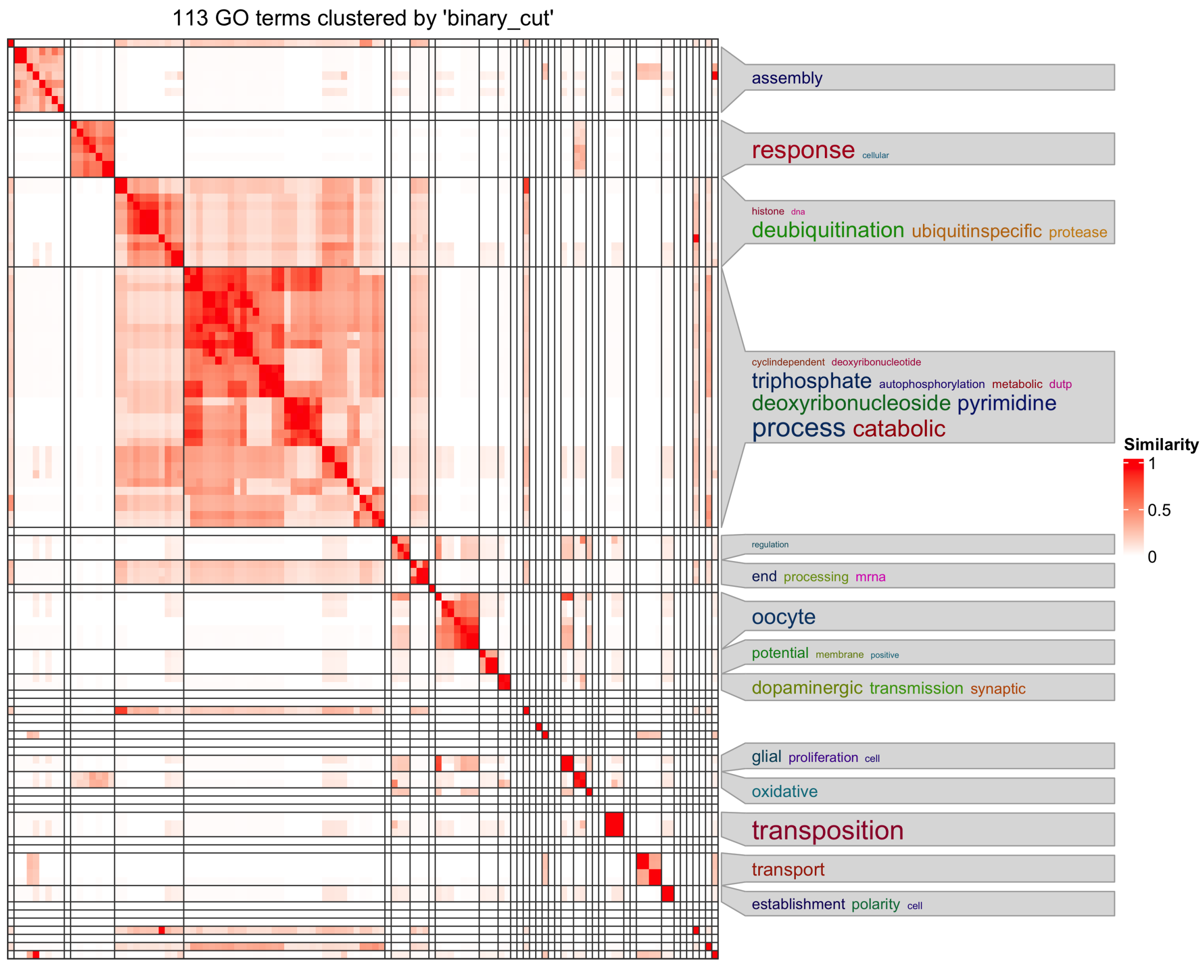

Figure S8: **GO-term enrichment and semantic clustering of male line-biased samples on day 14.**

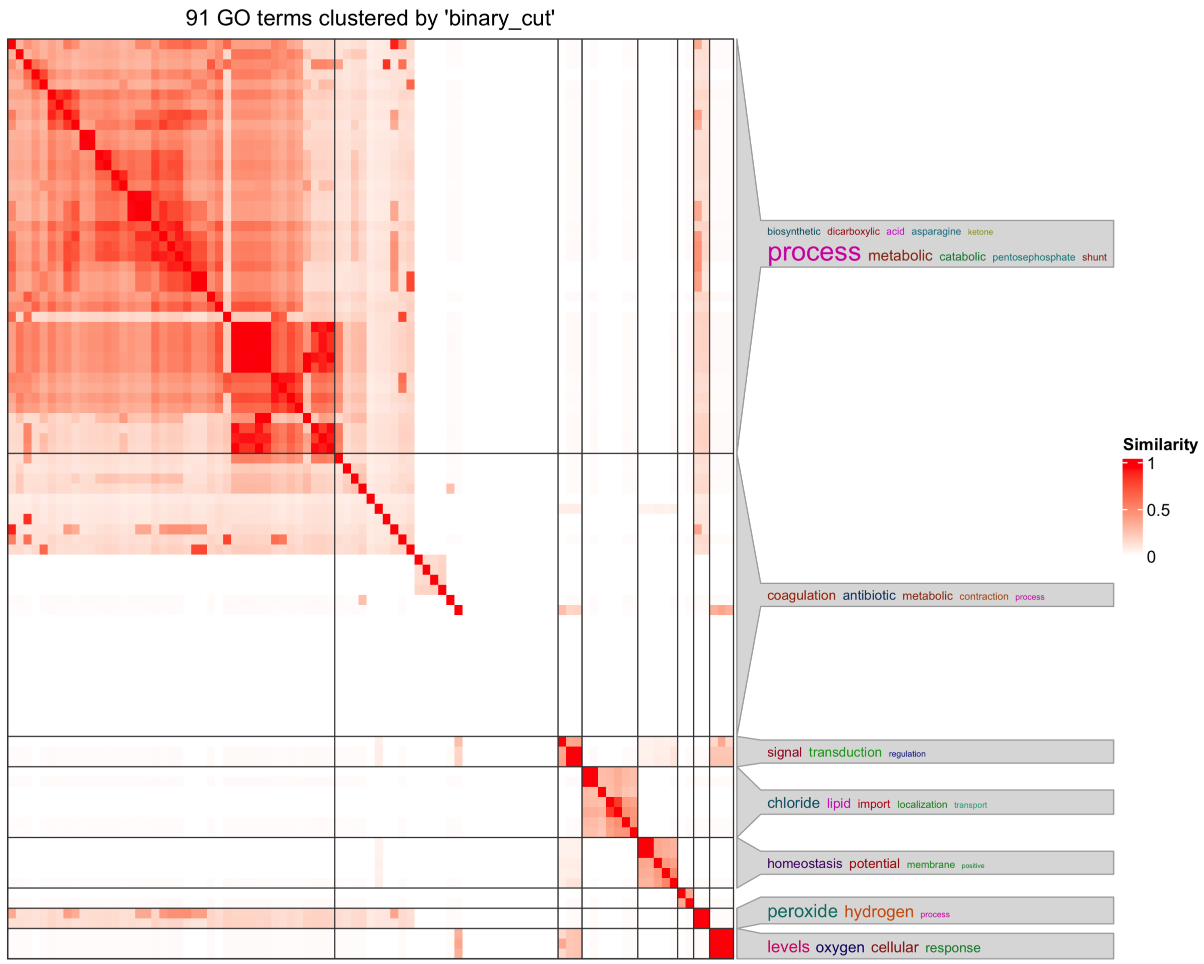

Figure S9: **GO-term enrichment and semantic clustering of male line-biased samples on day 16**.

Figure S10: **GO-term enrichment and semantic clustering of male line-biased samples on day 18**.

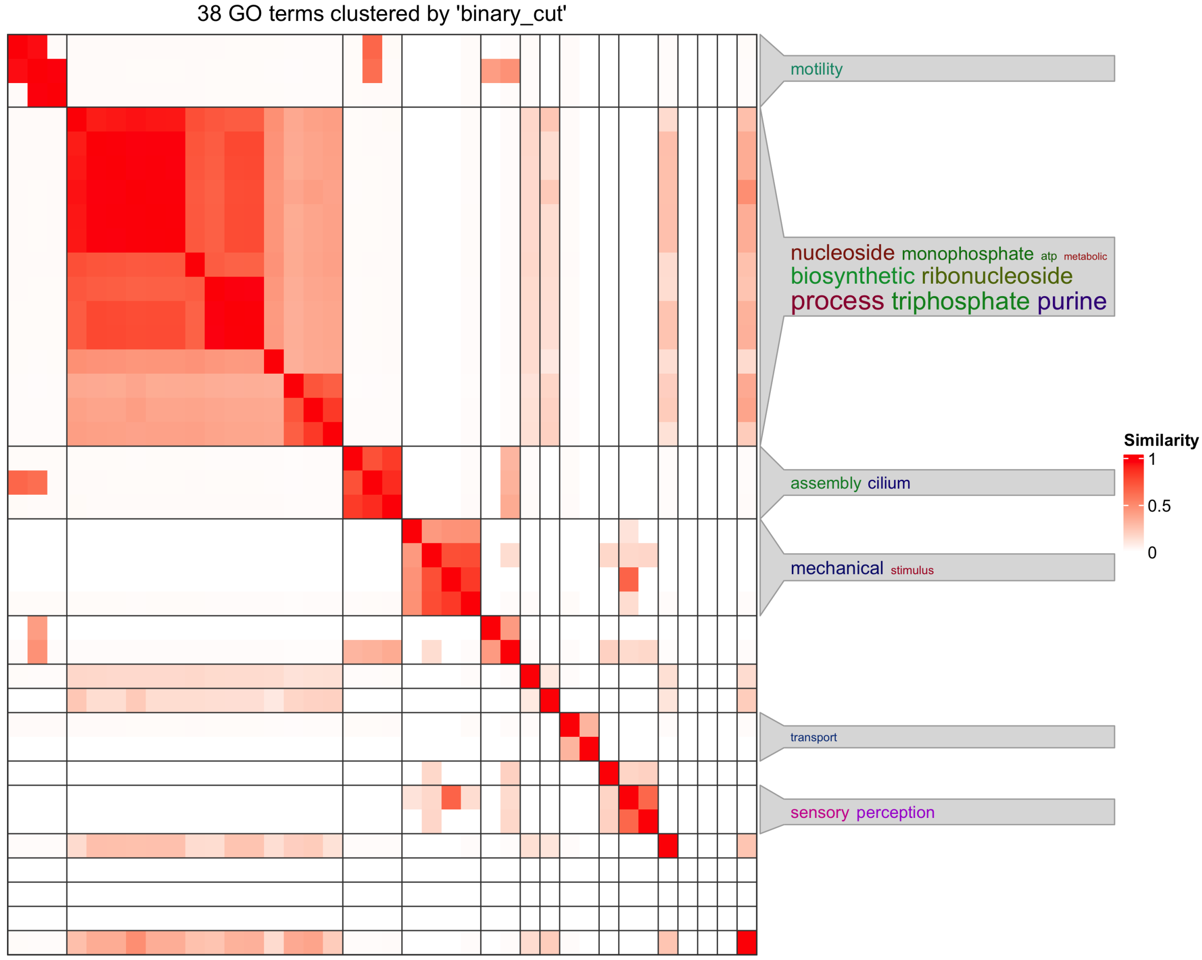

Figure S11: **GO-term enrichment and semantic clustering of genes that are sex-biased**. Full dataset with line as fixed effect, GO terms that are enriched in sex-biased genes of all three time points, intersection as specified in Fig. 2D

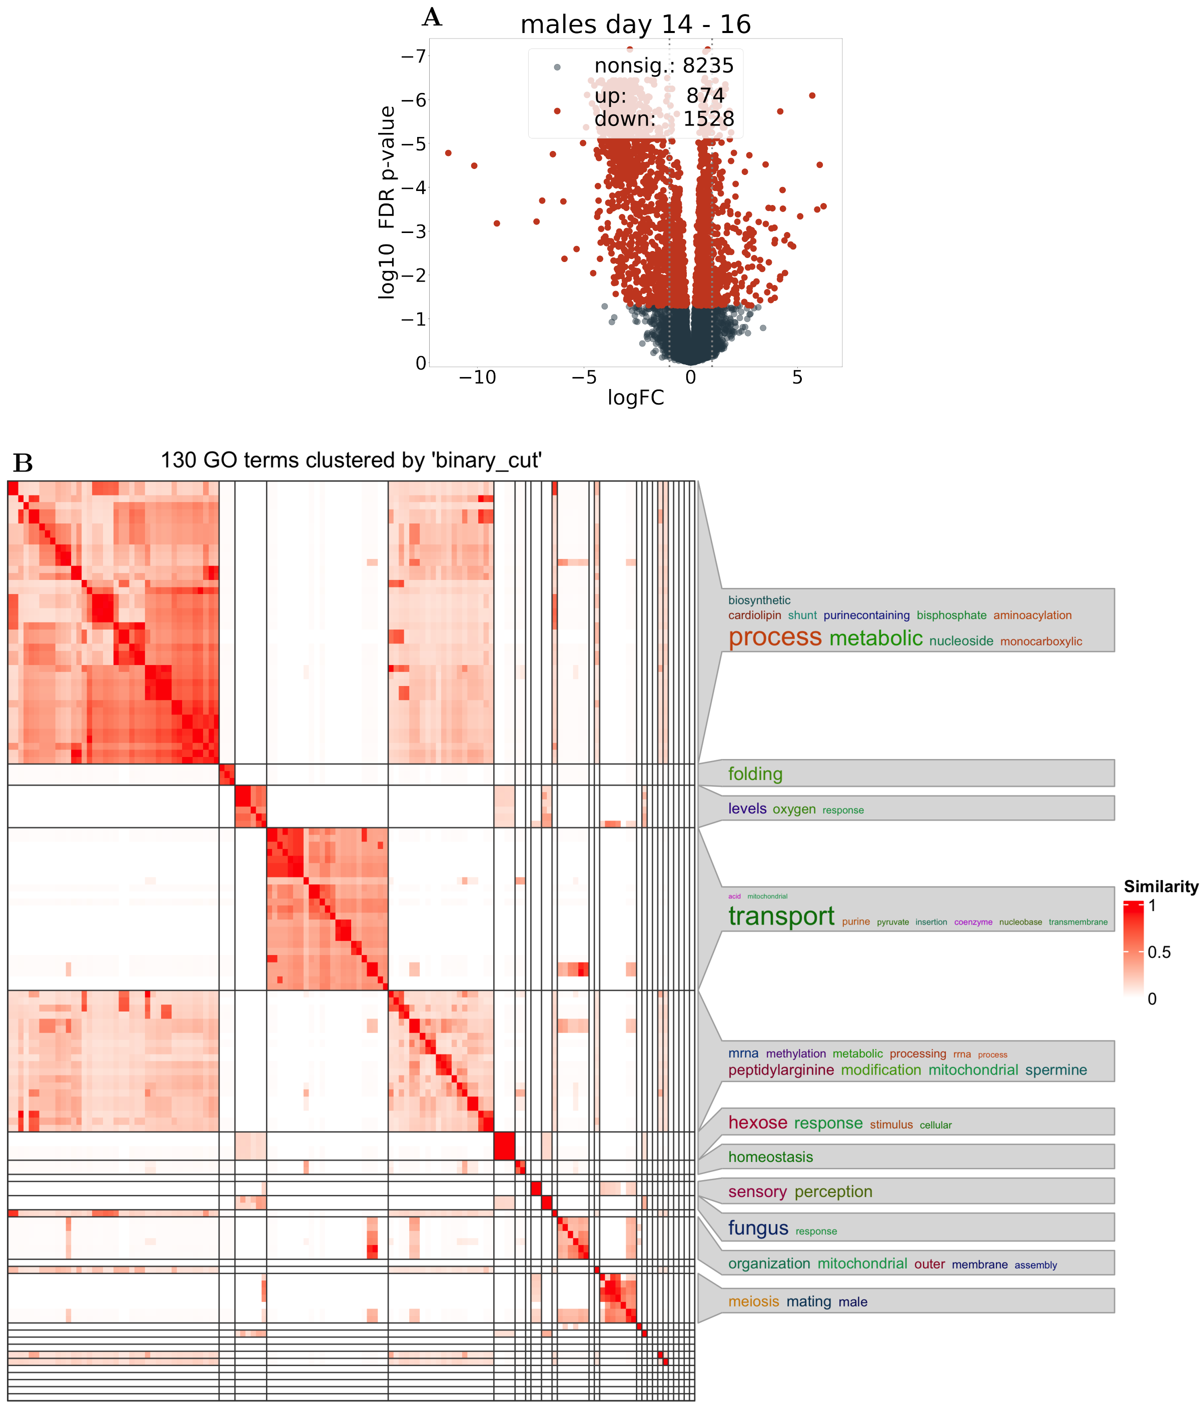

Figure S12: **volcano plot, GO-term enrichment and semantic clustering of genes that are sex-biased**. Only male samples with day 14-16 comparison (Fig. 2E intersection). (A) shows the volcano plot, and (B) the semantic clustering of GO-terms that are enriched in sig. DE genes.

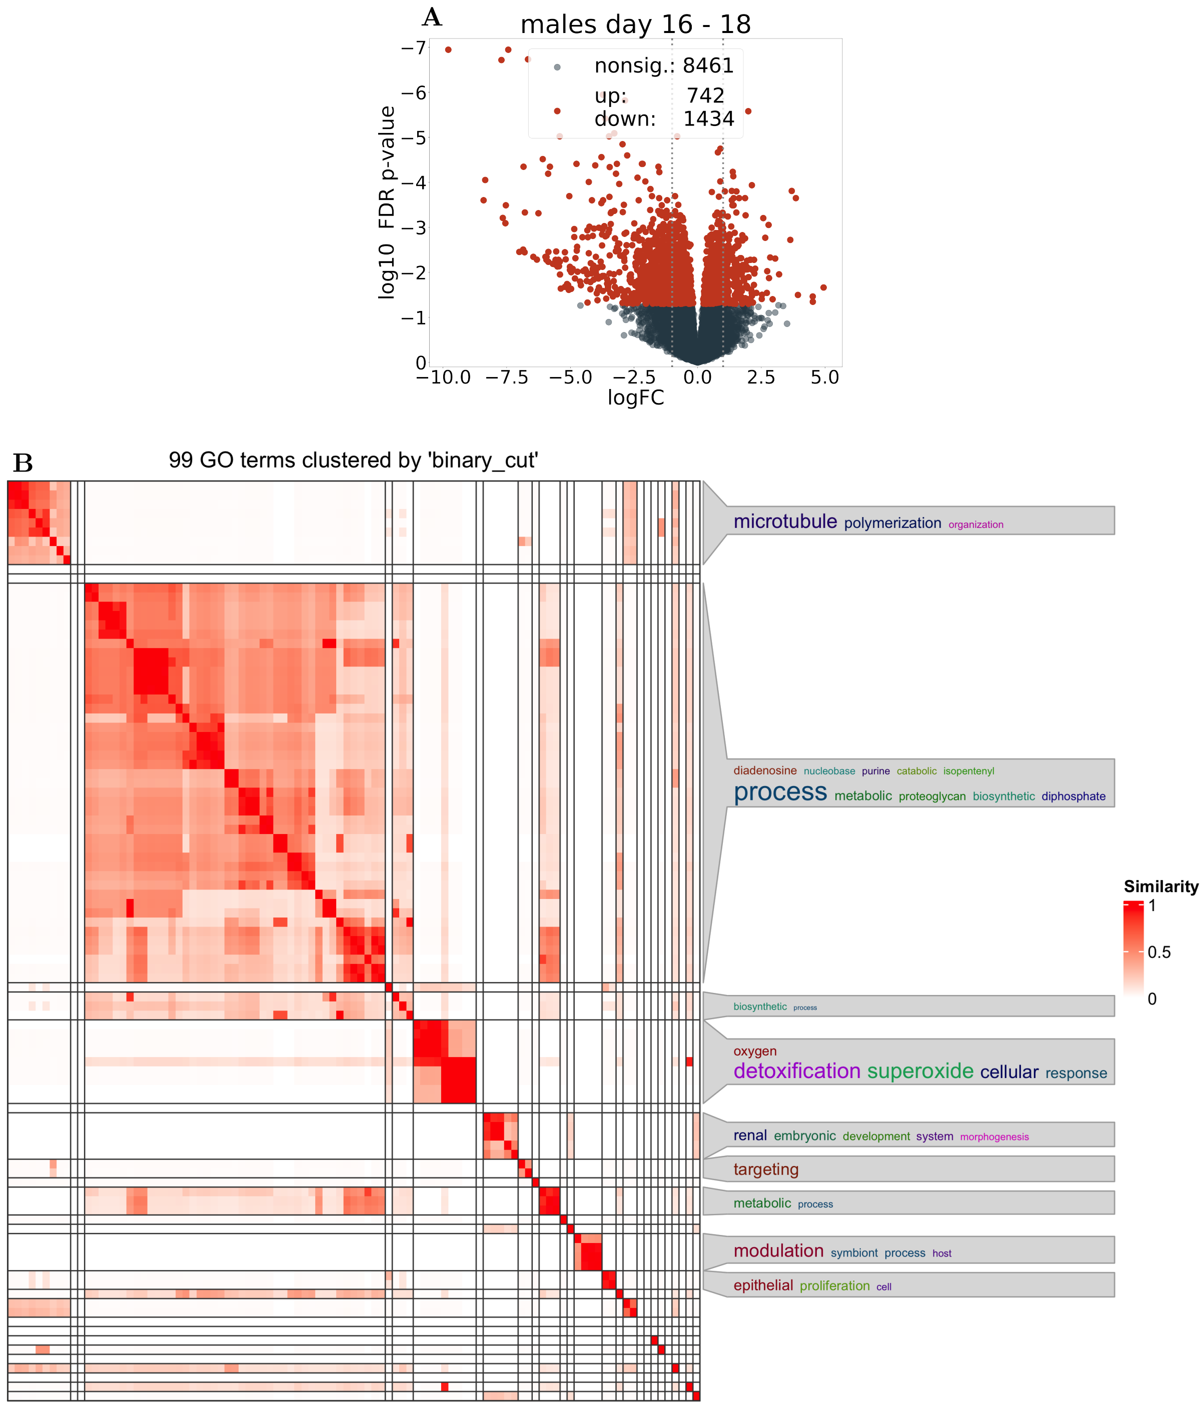

Figure S13: **volcano plot, GO-term enrichment and semantic clustering of genes that are sex-biased**. Only male samples with day 16-18 comparison (Fig. 2E intersection) (A) shows the volcano plot, and (B) the semantic clustering of GO-terms that are enriched in sig. DE genes.

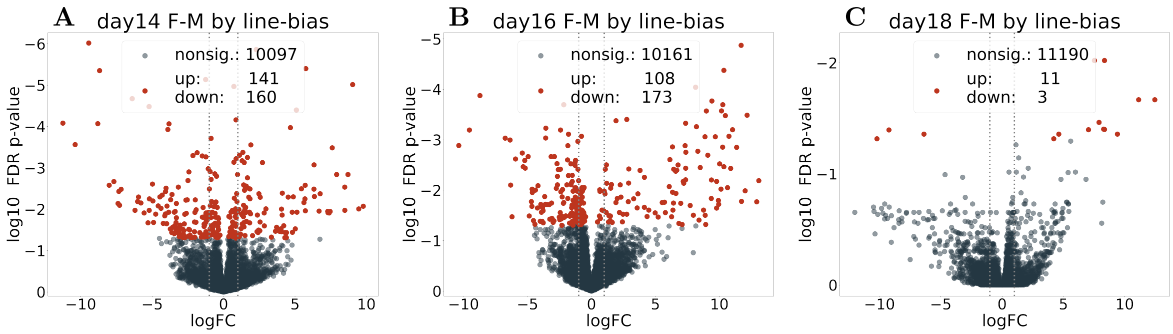

Figure S14: **Volcano plot of line-by-sex interaction for samples of each time point**.
